## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. This application is in condition for allowance except for the presence of claims 1-7, 9-11, 14-16, and 18-21 directed to groups and species non-elected with traverse. The requirement was made final, and no petitions have been filed.

Authorization for this examiner's amendment was given in a telephone interview with Steve Wegman (Reg. No. 31,438) on 9/29/2009.

The application has been amended as follows:

Claims 1-7, 9-11, 14-16, and 18-21 have been cancelled.

***Allowable Subject Matter***

3. Claims 8, 12, 13, and 17 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The newly added claim limitations limit the scope of the claims to a band saw vibration reducing member specifically contacting the housing of a drive motor of a band

saw, the vibration reducing member \*(buffer) being comprised of a separate motor which drives an eccentric to counter the vibrations of the motor and the impact felt at the motor by the impact of an initial contact of a blade with a work-piece.

As discussed previously, vibration isolating mechanisms are known in the art (See Wells '131, buffer 32/33) which act at a cutting point on the saw blade to prevent vibrations from returning to the saw blade motor.

Similarly active damping may take place at the point of saw contact to reduce and eliminate the vibrations of a saw blade from transmitting back to the saw blade (and vice versa- prevent motor vibrations from returning to the blade) as seen in Fukugami (3,801,089). Fukugami discloses a motor 71, figure 9 which connects to a blade guide 7 (inter alia- generally) for imparting a corrective vibration to the blade in response to the resonance of the blade (See column 4 lines 44-66~). Fukugami teaches applying the countering forces at a blade and not at a motor housing, and there is no reason to think that one of ordinary skill would have desired to change the position to the motor housing. The blade is the most important element of a band saw to prevent from vibrating- not because of unnecessary wear, but because of the inaccuracy of cut that vibrations cause. Removing the vibration damper to the motor housing prevents damage to the motor, but would not accurately translate into effective protection from blade movement.

Additional other means for damping vibrations in a saw generally are known and seen widely in the art. Specifically, as set forth by Brandstadter active vibration response can be applied to an axle to reduce the vibrations experienced by one or more

of the elements (from motor to blade or from blade to motor in the present case).

Brandstadter uses a hydraulic system to respond to the vibration, and therefore does not have a motor which drives a disc rotationally. Additionally, the position of the damper at an axle would provide no motivation or reason to be modified to apply to a casing of a drive member (motor) as in the present invention.

### ***Conclusion***

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
